Comments:

- I gave you 5/5 in Jest, however, bare the following in mind 🤔
 - You only catch errors you're not doing anything with them.
 - MOST IMPORTANTLY, in most of your cases you're checking if the status is 200, and the length is +- 1 and so on.
This is, however, just checking the response of your server, you didn't check the actual structure of the returned data (the functionality of the database)
The good news is, it's simple to overcome and you have till the end of sprint 6 to do it
- Dear Nada, I realize I once told you that in your commits you deleted more lines than what you've added. I'm happy you took it upon yourself to change that. However, this is not how you do it 🙄😂

3. Dear 'Mohamed' please explain?

4. As always, great work from each and every individual. Proud of you, keep it up guys 💪 you're on the right track to winning the competition 🎉
